

## General Description

SY8891E is a high efficiency 1.5MHz synchronous step down DC/DC regulator, capable of delivering up to 1A output current. It can operate over a wide input voltage range from 2.5V to 5.5V and integrate main switch and synchronous switch with very low  $R_{DS(ON)}$  to minimize the conduction loss.

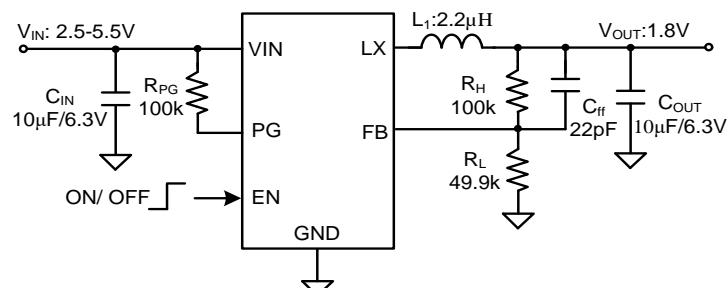

SY8891E is in a space saving, low profile SOT563 package.

## Features

- 2.5V to 5.5V Input Voltage Range.
- Low  $R_{DS(ON)}$  for Internal Switches (top/bottom) 170mΩ /100mΩ
- High Switching Frequency 1.5MHz Minimizes the External Components
- Internal Soft-start Limits the Inrush Current
- 100% Dropout Operation
- Forced PWM Operation
- Power Good Indicator
- Hiccup for Short Circuit Protection
- Output Auto Discharge Function
- RoHS Compliant and Halogen Free
- Compact Package: SOT563

## Applications

- Set Top Box
- USB Dongle
- Media Player
- Smart Phone

## Pin Description

| Pin Name | Pin Number | Pin Description   |
|----------|------------|---|
| FB       | 1          | Output feedback pin. Connect this pin to the center point of the output resistor divider (as shown in Figure 1) to program the output voltage: $V_{OUT}=0.6\times(1+R_H/R_L)$ .             |
| GND      | 2          | Ground pin.   |
| VIN      | 3          | Input pin. Decouple this pin to GND pin with at least a 10μF ceramic capacitor.   |
| LX       | 4          | Inductor pin. Connect this pin to the switching node of inductor.   |
| EN       | 5          | Enable control. Pull high to turn on. Do not leave it floating.   |
| PG       | 6          | Power good indicator. Power good indicator (open drain output). Low if the output < 90% or the output >120% of regulation voltage; High otherwise. Connect a pull-up resistor to the input. |

**Note1:** Stresses beyond the “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Note2:** θ<sub>JA</sub> of SY8891EARC is measured in the natural convection at T<sub>A</sub> = 25°C on 2OZ two-layer Silergy evaluation board. Pin 4 is the case position for SY8891EARC θ<sub>JC</sub> measurement.

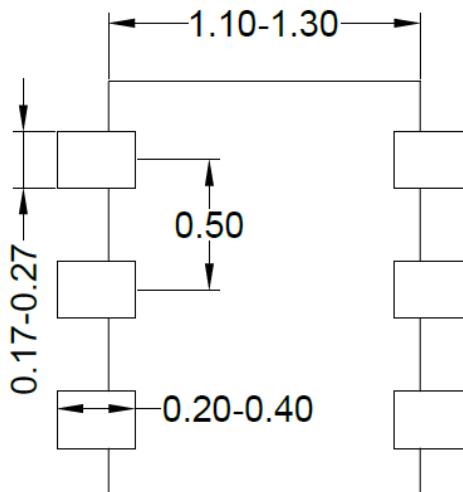

**Note3:** The voltage is measured by 500MHz bandwidth oscilloscope. Probe point should be the LX and GND pins, and the loop formed by probe tip and ground ring should be minimized to avoid noise coupling.

**Note4:** The device is not guaranteed to function outside its operating conditions.
